Oracle packs: what to build next

Keep our 9 products and add 6: 4 on AIDP, 2 on OCI.

6 / 8 new packs within the cap (1 of them is a service)

4 / 4 priority laser campaigns covered ★

6 / 6 mini-site groups covered (Transactions: from 0 to 2)

10 / 10 distinct AIDP and NVIDIA use cases mapped

#	PACK · SITE GROUP	WHO HAS THE PROBLEM	WHAT CHANGES	RUNS ON	LASER CAMPAIGN
ORACLE AI DATA PLATFORM (AIDP) AND AI LAKEHOUSE 4 new · 2 kept					
1	**Business metrics Q&A + Cross-system ERP Q&A** HAVE Knowledge & analytics	**Managers:** "what is our margin by region?" waits a week; numbers disagree.	Each metric defined once; anyone asks in plain words: one number, in minutes.	AI Lakehouse, plain-language query (Select AI)	★ L1 Lakehouse 225 · L3 Oracle DB 168 · A3 Fusion 215
2	**Document Q&A** NEW Knowledge & analytics	**Legal:** "can we exit this contract early?" means reading contracts one by one.	Plain-word questions over stored documents; the answer quotes the clause, in minutes.	AIDP agent flow, no GPUs	A5 Unstructured data 238 (largest)
3	**P&L variance analysis** NEW Deep research	**CFO:** "why did we miss budget?" takes analysts two weeks; losses run on.	Oracle's agent ranks the causes, cites the records, proposes an action: same day.	Oracle Deep Insights agent[1]	A2 Fusion Data Intelligence 144 · A4 Analytics 123
4	**EBS exception agents** NEW Transactions · EBS: Oracle's older ERP	**EBS finance and supply:** held invoices, late orders, slow stock found late; cash stuck.	Agents flag each case and prepare the fix; a person approves: faster close.	Oracle EBS agent templates[1]	★ A1 E-Business Suite 123
5	**Customer churn and retention** NEW Forecasting & optimization	**Telco or utility:** "who will cancel?" is learned at cancellation; discounts go to stayers.	Weekly risk score per customer, with reason and cheapest offer: less wasted discount.	AIDP notebooks (ML model)	– (upsell in L1, A3)
ORACLE CLOUD (OCI) AI + NVIDIA 2 new · 4 kept					
6	**Plan vs actual investigation** HAVE Deep research	**Project controls:** "why did this project overrun?" has no answer; next bid repeats it.	Each overrun traced to its cause and source record before the next bid.	NVIDIA AI-Q	– (own deals)
7	**Large docs processing and review** EXTEND Documents	**Operations:** contract rates retyped by hand: days per contract, wrong rates paid.	Terms extracted with page links, a reviewer confirms: no retyping, no overpayment.	NVIDIA NeMo Retriever; no-GPU AIDP edition to add	A5 via the AIDP edition
8	**Customer service agent** NEW Transactions	**Contact centre:** scripted bots fail off-script; routine requests queue for staff.	An agent answers, completes simple requests, hands off the rest: lower cost per contact.	Digital Assistant + OCI GenAI; NVIDIA voice later	★ O1 Digital Assistant 70
9	**Workforce optimization** HAVE Forecasting & optimization	**Dispatchers:** plans built by hand: uneven loads, fewer paid jobs a day.	A four-week plan in minutes, balanced by zone: more jobs per technician.	NVIDIA cuOpt + Oracle Field Service	A3 Fusion 215 (Field Service users)
10	**Repair-or-replace decisions** HAVE Video & image	**Claims and repair:** damage judged by eye: needless replacements, repeat visits.	Damage measured from photos against the rules; a person confirms: fewer replacements.	NVIDIA VSS + Cosmos model	– (own deals)
11	**AI running-cost reduction** NEW SERVICE Service	**CTO:** paid AI services cost more with every user; data leaves the company.	Apps move to a tuned open model on OCI: same answers, lower cost per request.	Nemotron tuned with NeMo, on OCI	★ O3 AI running cost 189+

Laser = Oracle's 13 EMEA sales campaigns · ★ priority · L = AI Lakehouse, A = AIDP, O = OCI AI · number = target accounts · – = no campaign, own deals · [1] not released yet · **Also kept, no own row:** Account insights (news that opens a sale), Case evidence collection (a cited file per complaint), on row 6's engine; Fleet route optimization (today's van routes), on row 9's · 22 Sep proposals = rows 2–4, 8, 11 · VSS, cuOpt: NVIDIA, not NeMo.

DISTINCT USE CASES → OUR PACK

AIDP

- **Explain a miss** → P&L variance
- **Fix ERP exceptions** → EBS agents
- **Documents** → Document Q&A (answers), Large docs (fields)
- **One data layer** → entry to row 1
- **Predict per customer** → Churn

OCI + NVIDIA

- **Cited research** → Plan vs actual
- **Fields into systems** → Large docs
- **Video, images** → Repair-or-replace
- **Voice agents** (prototype) → Customer service
- **Own model** → AI cost reduction

HOW ORACLE SELLS AIDP

Deliver: chat, workflows, apps

Agents: Deep Insights, action agents with approval

Business map: an ontology of the company's data

Data where it sits: apps, lakehouse, databases

Sold to the CFO as an outcome: demo in 2–3 days, live in 4–5 weeks, $1M+ deals.

Rows 3–4: Oracle's agent + our demo kit (questions, sample data, expected answers, money case) + rollout. **Rows 2, 5:** our build on AIDP. **NVIDIA packs:** our software, kept apart (Oracle's ask).

BEFORE WE BUILD

- **Ask Oracle:** AIDP packs ahead of deals? Partner leads: not yet (16 Sep). AIDP strategy lead: join top deals (29 Sep).
- [1] **Not released yet:** Deep Insights (whitelist only), EBS agent templates (~16 Oct, per Oscar); until then, rows 3–4 per deal.
- **Row 11:** agree with Oracle's OCI AI team (it sells model hosting).
- **Services, not packs:** data moves into row 1 (L2 warehouses, L4 pipelines, L5 Exadata) via the Lakehouse Quick Start; Databricks moves per deal; Sovereign (O2, 197) on any OCI row.
- **Not proposed:** demand forecasting (Churn's scoring covers it), a migration pack.
