

Account insights

Accelerator App by SoftServe

More opportunities from the companies you already track: the news, filings and updates on them become a named next move for each — scored, cited and reviewed before anything reaches your systems.

THE PROBLEM

An account manager, a partnerships lead or a portfolio manager each covers dozens of companies and cannot keep up with the news, filings and updates landing on all of them.

- **Too much to keep up with:** dozens of companies, hundreds of sources, one person
- **Found out too late:** the update surfaces after the company has already decided
- **Only the company in the headline:** what it means for its suppliers, customers, competitors or sister holdings is never worked out

THE SOLUTION: REVIEW, DON'T RESEARCH

Reviewer agreement ↑

Confidence calibrated

Coverage ↑

Each morning they see the handful of changes that matter across the companies they cover — what each one means and what to do about it — and review that list instead of assembling it.

WHY IT SELLS: FOR ORACLE ACCOUNT TEAMS

- **Net-new OCI consumption:** recurring GPU and inference workloads on dedicated OCI clusters, driven by signal volume rather than seat count
- Complements Oracle's own account intelligence — Sales Command Center works on first-party CX data; this pack brings the external signal and the next move
- Repeatable across Oracle customers with named accounts — customer accounts in Oracle CX, partners or portfolio holdings, with a real catalog of moves

WHERE IT APPLIES

Logistics & supply chain

Financial services & banking

Industrial & manufacturing

Private equity funds

In delivery with DHL: Client Compass — a 12-week proof of value on NVIDIA AI-Q over OCI. Account data from the CRM, approved public sources and commercial feeds such as Dow Jones Factiva are read per account; the signals in them are extracted, mapped to DHL's logistics capabilities and service offerings, scored and cited to source, and every record is reviewed by the account team in a reviewer screen before it goes anywhere.

Reviewer agreement
of generated moves approved by the team's own reviewers — measured in the proof of value

Confidence calibrated
reviewer agreement within each confidence band — measured in the proof of value

Coverage
of the companies in scope with a reviewed record each period — measured in the proof of value

Contracted proof of value; results to follow.

SERVICE PACKAGES

	PoV Jumpstart S One signal set, one segment, files in and out: prove the reviewer agrees.	Integration M Wired into the team's day: licensed feeds in, system of record out.	Scaling L Make it improve: live write-back, outcome capture, confidence tested against real outcomes.
