# Goal: packs that feed Oracle's go-to-market

## Fit Oracle's go-to-market

Each pack lands in a campaign Oracle already runs, for customers Oracle already has.

## Generate leads

A clear story and a live demo that get an Oracle seller into a first meeting.

## Accelerate conversions

A fixed-scope proof of value on the customer's own data, then production with SoftServe.

**Fit** is the entry ticket; **more leads** and **faster conversions** are what Oracle gets from us.

# Oracle brings us into two warm campaigns; cold intros we develop

**WARM CAMPAIGNS** · where Oracle AI & Data (EMEA) sees us explicitly

**COLD** · we explore proactively

## AIDP + AI Lakehouse

PRIORITY 1

ORACLE AI DATA PLATFORM

CAMPAIGN

Oracle's laser campaigns

USE CASES

Lightweight “ask your data” AI

CUSTOMERS

Oracle EBS (older ERP) estates; firms with several in-house sources on Oracle databases

## OCI + NVIDIA NeMo

PRIORITY 2

OCI DEDICATED AI CLUSTERS

CAMPAIGN

NVIDIA-funded pipeline

USE CASES

Optimisation (cuOpt), video (VSS), research agents (AI-Q)

CUSTOMERS

Large existing OCI tenants

## AIDP or OCI

AI DATA PLATFORM OR DEDICATED AI CLUSTERS

CAMPAIGN

One-off Oracle intros to named accounts (NATO, Toyota)

USE CASES

To be found per account

CUSTOMERS

Existing Oracle customers: EBS, Fusion, OCI

# Three ways to package; Oracle backs the first

1

CURRENT

## Package what we sell

One illustrative pack per platform, plus a pack for every case we take through presales and PoVs.

ORACLE'S VIEW

- **Preferred** by Neil and Gero

→ Slide 4

2

POTENTIAL

## Package likely bestsellers

Proactively package popular cases that showcase what Oracle pushes.

ORACLE'S VIEW

- **Not now** for AIDP; little resonance with Neil and Gero

→ Slide 5

3

POTENTIAL

## Package our own expertise

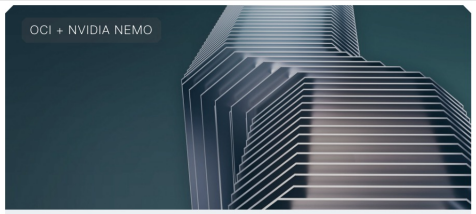

Proactively package cases beyond databases and ERP, such as physical AI, built on our expertise.

ORACLE'S VIEW

- **Off focus:** mostly OCI, while Neil and Gero push AIDP and the coming Oracle Intelligence platform

→ Slide 6

# Option 1 today: our presales and PoV cases, packaged

DOCUMENT PROCESSING

### Large docs processing and review

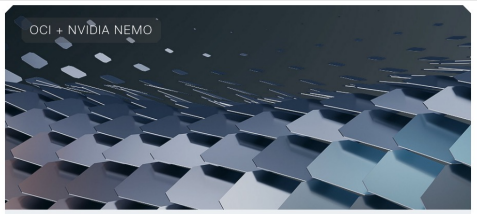

Contracts reach your systems without days of keying by hand, and a wrong rate is caught at review, not on the invoice.

DEEP RESEARCH & INVESTIGATION

### Account insights

Opportunities your sellers would otherwise miss and risks caught before renewal, for every account a market event touches.

FORECASTING & OPTIMIZATION

### Workforce optimization

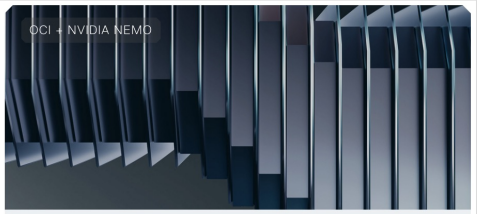

The same technicians complete more jobs a day, with less driving and waiting, on a four-week plan balanced across every zone.

DEEP RESEARCH & INVESTIGATION

### Plan vs actual investigation

Stop the next project repeating the last one's overruns: project controllers see each work package's cost and schedule against plan, with the cause and the record behind every gap.

DEEP RESEARCH & INVESTIGATION

### Case evidence collection

Investigators spend their hours deciding cases, not gathering evidence: every case file arrives complete and built the same way, whoever works it.

ENTERPRISE KNOWLEDGE & ANALYTICS

### Cross-system ERP Q&A

Managers get answers across the ERP and CRM on their own, while the decision is still open, instead of weeks later in a report.

ENTERPRISE KNOWLEDGE & ANALYTICS

### Business metrics Q&A

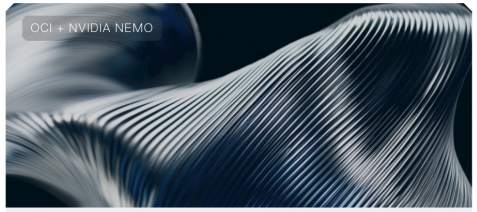

Every team asks in plain words and gets the same number for the same metric, wherever the data sits.

FORECASTING & OPTIMIZATION

### Fleet route optimization

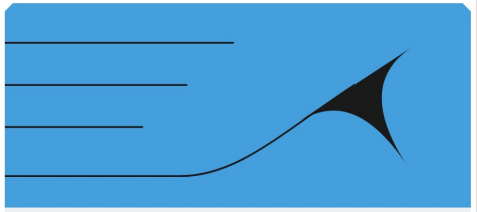

Lowers the cost of every field visit: each van's day planned around booked slots, engineer skills and electric-van charging.

VIDEO & IMAGE INTELLIGENCE

### Repair-or-replace decisions

A replacement paid for only when the rules require one, and the right job booked first time: repair-or-replace calls on damaged vehicles, containers and equipment, measured from photos.

### Looking for another solution?

Tell us the workflow you need fixed, and we will say how we would do it.

# Option 2: new packs that show what Oracle's platforms do

| | PACK | WHO HAS THE PROBLEM | WHAT CHANGES | RUNS ON | CAMPAIGN |
|---|---|---|---|---|---|
| NEW | **Document Q&A** | **Legal** reads every contract to answer one question. | Ask stored documents in plain words; the answer quotes the clause. | AIDP | Laser A5 |
| NEW | **P&L variance analysis** | **The CFO** needs two weeks to explain a budget miss. | Oracle's agent ranks the causes and proposes an action, same day. | AIDP | Laser A2, A4 |
| NEW | **EBS exception agents** | **EBS finance and supply** find held invoices, late orders, slow stock too late. | Agents flag each case and prepare the fix for approval: faster close. | AIDP | ★ Laser A1 |
| NEW | **Customer churn and retention** | **Telcos and utilities** spot leavers at cancellation; discounts go to stayers. | Weekly risk score per customer, with the reason and the cheapest offer. | AIDP | Upsell in L1, A3 |
| EXTEND | **Large docs processing and review** | **Operations** retype contract rates by hand; wrong rates get paid. | Terms pulled with page links; a person confirms. | OCI dedicated AI clusters + an AIDP edition to add | NVIDIA-funded; Laser A5 |
| NEW | **Customer service agent** | **Contact centres:** scripted bots fail; routine requests queue for staff. | An agent answers, completes simple requests, hands off the rest. | OCI dedicated AI clusters with Oracle Digital Assistant | ★ Laser O1 |
| SERVICE | **AI running-cost reduction** | **CTOs** pay an outside AI service per request; data leaves the company. | Apps move to a tuned open model on OCI: same answers, lower cost. | OCI dedicated AI clusters | ★ Laser O3 |
| HAVE | **Business metrics Q&A + Cross-system ERP Q&A** | **Managers** wait a week for answers across finance and sales; numbers disagree. | Metrics defined once: ask in plain words, one number in minutes. | AIDP + AI Lakehouse | ★ Laser L1; L3, A3 |
| HAVE | **Plan vs actual investigation** | **Project controls** can't trace overruns, so the next bid repeats them. | Each overrun traced to its cause and record before the next bid. | OCI dedicated AI clusters | NVIDIA-funded |
| HAVE | **Workforce optimization** | **Dispatchers** plan by hand: uneven loads, fewer paid jobs a day. | Four-week plan in minutes; more paid jobs a day. | OCI dedicated AI clusters | NVIDIA-funded; Laser A3 |
| HAVE | **Repair-or-replace decisions** | **Claims and repair teams** judge damage by eye: needless replacements. | Damage measured from photos against the rules; a person confirms. | OCI dedicated AI clusters | NVIDIA-funded |

★ Oracle priority campaign · **Laser L / A / O:** Oracle's campaigns for AI Lakehouse, AIDP and OCI AI customers · **NVIDIA-funded:** OCI deals Oracle brings with NVIDIA funding · **Grey rows:** packs we already have

# Option 3: our expertise beyond databases and ERP, mostly on OCI

| CALL | CASE | PROBLEM | SOLUTION | RUNS ON |
|---|---|---|---|---|
| PURSUE | **Digital twins for sites and factories** | **Planners** redesign sites and factories on paper and on site; each change takes months. | A live 3D twin tests changes before building: siting from 18 months to 8 weeks. | OCI dedicated AI clusters<br>NVIDIA Omniverse |
| PURSUE | **Physics simulation models** | **Engineers** wait hours per physics simulation, so every design change delays the product. | Physics-ML models on GPUs: simulation from 4 h to 5 min, downtime −15%. | OCI dedicated AI clusters<br>NVIDIA PhysicsNeMo |
| PURSUE | **GPU workload tuning** | **CTOs** run AI and simulation jobs on untuned cloud GPUs; the bill keeps climbing. | Workloads moved to dedicated clusters and tuned: run time halved, cost about −50%. | OCI dedicated AI clusters |
| PROOF ONLY | **Simulation-first robotics** | **Robotics teams** lack real training footage, so each robot deployment waits months. | Trained in simulation, tuned on 15 min of real video: recall from 49% to 93%. | OCI dedicated AI clusters<br>synthetic data |
| PROOF ONLY | **Industrial IoT and production analytics** | **Production engineers** can't explain losses with machine and test data spread over ~10 systems. | One analytics layer over factory data: energy −10%, testing productivity +10–15%. | AIDP |
| PROOF ONLY | **Energy production and emissions** | **Oil and gas operators** tune well pumps and gas lift by hand, so wells under-produce. | ML on production data tunes pumps and gas lift: +45,000 barrels a month. | AIDP |
| PARK | **Seismic and asset-image deep learning** | **Geoscientists and inspectors** read seismic volumes and inspection images by hand; findings come late. | Deep learning segments 3D seismic data and flags corrosion in images (PoC level). | OCI dedicated AI clusters |
| PARK | **Generative content on brand data** | **Brand teams** produce labels and visuals by hand, so campaigns wait on designers. | Models trained on brand assets generate labels and images at volume, live in production. | OCI dedicated AI clusters |
| PARK | **Vision on aerial imagery** | **Insurers** inspect properties visit by visit, so underwriting data is thin and costly. | Vision models read 12 property attributes from aerial images for 25,000+ sites. | OCI dedicated AI clusters |

**Call (the expertise review's verdict on Oracle demand):** Pursue = a live Oracle lead or priority campaign · Proof only = strong SoftServe proof, no Oracle lead · Park = thin proof or no demand signal.
**Also found, data- and ERP-centric (Option 2 territory):** supply-chain agents on ERP data · CFO finance analytics · warehouse migrations · a governed semantic layer · banking risk data · document Q&A.
